Telefax Data Systems launches new LED Tickers and Displays

Telefax has introduced an eye catching and customisable LED Ticker and LED Display range featuring single and multi line messaging displays and best in class data and video walls. These new displays come in different styles and sizes to suit every purpose; corporate message boards, online RSS news feeds, new product and service promotion, the new ElectroDisplay range can be customised by Telefax's experienced designers to fulfil every company's objectives and aspirations.

From concept to completion, Telefax Data Systems bring over 25 years display design and installation experience to this new range of displays. They are now easier to configure and install and available with a personalised and extensive design service.

Telefax Data Systems work with architects, AV consultants, data providers, partners and customers alike to deliver the best display solution and welcome all enquiries.

Richard Meakin, Managing Director at Telefax said: "I am delighted to bring this new LED Ticker and Display range to the market. It offers considerable design flexibility and with our in-house developed software, it means we can deliver real-time information in a mix of different formats, from a simple single line LED Ticker to the new ElectroDisplay video wall."

Telefax's expertise is in selecting and designing the best type and style of display. Their customers have included the London Stock Exchange, Chicago Board of Trade, NYMEX New York, and Dubai Mercantile Exchange.
